DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 7-9, 11, and 19 rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 7 recites the formula of the amine used in the present invention; however, the formula reads on the compound ammonia, wherein R1, R2, and R3 are hydrogen.

Ammonia is not considered an amine (not an organic compound), and as such the claim is indefinite.

Claim 11 recites the limitation "...converted to *the amide...*" in line 4. There is insufficient antecedent basis for this limitation in the claim.

A broad range or limitation together with a narrow range or limitation that falls within the broad range or limitation (in the same claim) is considered indefinite, since the resulting claim does not clearly set forth the metes and bounds of the patent protection desired. See MPEP § 2173.05(c). Note the explanation given by the Board of Patent Appeals and Interferences in *Ex parte Wu*, 10 USPQ2d 2031, 2033 (Bd. Pat. App. & Inter. 1989), as to where broad language is followed by "such as" and then narrow language. The Board stated that this can render a claim indefinite by raising a question or doubt as to whether the feature introduced by such language is (a) merely

Application/Control Number:

10/577,629 Art Unit: 1621

exemplary of the remainder of the claim, and therefore not required, or (b) a required feature of the claims. Note also, for example, the decisions of *Ex parte Steigewald*, 131 USPQ 74 (Bd. App. 1961); *Ex parte Hall*, 83 USPQ 38 (Bd. App. 1948); and *Ex parte Hasche*, 86 USPQ 481 (Bd. App. 1949). In the present instance, claim 19 recites the broad recitation 0.0001 to 5 mol, and the claim also recites 0.005 to 1 mol, which is the narrower statement of the range/limitation.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lyons (4,485,246) and Pesa et al (US 4,356,124) in combination.

The claims are drawn to a homogeneous process for hydrogenation of dicarboxylic acids and/or derivatives, with an amine, in the presence of a catalyst comprising ruthenium or osmium, and an organophosphine, and wherein the hydrogenation is carried out in the presence of water.

Lyons teaches a process wherein succinic anhydride is hydrogenated in the presence of triethylamine using a ruthenium chloride/ triphenylphosphine catalyst, at 100° C and 150 psi, to produce gamma-butyrolactone (example 1).

ä

Application/Control Number:

10/577,629 Art Unit: 1621

Lyons does not teach the presence of water, and does not teach the production of a pyrrolidone. However, Pesa et al teach the preparation of a pyrrolidone by hydrogenation of maleic anhydride or succinic anhydride in the presence of an amine, wherein water or another inert substance is present (col. 2, line 34 to col. 3, line 1).

The instant claims are rendered obvious in view of the combined reference teachings since a person having ordinary skill in the art could have looked to both teachings and extrapolated from one or the other process conditions to arrive at an optimal process for producing products resulting from the hydrogenation of a dicarboxylic acid or derivative thereof.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Sikarl A. Witherspoon whose telephone number is 571-272-0649. The examiner can normally be reached on M-F 8:30-6:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yvonne Eyler can be reached on 571-272-0871. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
